

Dear All,

Please note that there is an important new component to download as part of the Isis installation, called SLIRP. This is a key program that allows any C or Fortran program to be converted easily into a module to fit against data using Isis. We will discuss the usage of this on Thursday. The download link is at:

<http://www.black-hole.eu/index.php/schools-workshops-and-conferences/1st-school-on-multiwavelength-astronomy/course-materials/83-isis-scripts>

Please try to get this working over the weekend so we can resolve any issues early next week if you have them. This one should be easy to install compared to Isis itself!

best,  
Sera
