

Installation Instructions for School-related Software

- [For Debian linux](#)
- [For Fedora linux](#)
- [For Ubuntu linux](#)
- [For Mac OS10.5/10.6](#) 

Scripts for X-ray/Multiwavelength days:

You will need to download the .isisrc* file and unpack them in your home directly.

<http://pulsar.sternwarte.uni-erlangen.de/black-hole/2ndschooll/coursematerial/isisrc.tar.gz>

This is a gzipped, tar file that contains the following files:

./isisrc ./isisrc_conf ./isisrc_data ./isisrc_fitfun ./isisrc_flux
./isisrc_plots

These files are meant to be unpacked in your main directory. In the main .isisrc file, there is a path variable that needs to be edited to point to your main directory, so that the other .isisrc_* files will be loaded as well. *Important Note:* These files contain only Michael Nowak's own custom S-lang routines. You still need to download and install ISIS separately, following the software installation instructions!

*** For an ISIS introduction see J. Wilms' [lecture on X-ray astronomy](#) ***

Matrix of install info:

The point of this is to see who's done what on which system, so you can get ideas or also ask for help if you have a particular system. It's also for the reference of the teachers!

Software	Platform/OS	Process	Issues encountered, if any	Quick description of fix
CASA p	Daniel Asmus	Fedora 11, 32bit	KDE	All
	problem on linux, please make sure to use the updated links.
